WELCOME MESSAGE

Dear colleagues and friends,

On behalf of the Local Organising Committee, I would like to warmly invite you to the 14th European Fluid Mechanics Conference that will take place in Athens, Greece on September 13-16, 2022.

The Steering and Organizing Committees along with supporting scientific associations, will develop an exceptional scientific program focusing on recent advances and future trends in fluid mechanics, bringing together the European fluid mechanics community for extensive discussion and networking opportunities, especially after such a long period of lockdowns and restrictions in meeting physically.

Plenary lectures, keynote lectures, workshops, oral and poster presentations will make up the program, all delivered by distinguished invited speakers, active academics and researchers in the field of fluid mechanics and promising members of our scientific community, either students or young scientists.

Alongside the technical program, participants will enjoy Athens, a destination of mythical dimensions, historical sites and modern new buildings, one of which is the conference venue, which allows for a perfect event for science, education, networking and lasting memories.

We look forward to welcoming you to Greece, a country widely known for the quality of its scientists, the deep roots to scientific thought and of course its hospitality in some of the most beautiful natural environments one can encounter on our planet.

With warm regards,

John Tsamopoulos

Professor, Fellow of APS/DFD and
Director of the Laboratory of Fluid Mechanics and Rheology

Organised by:

EUROMECH - European Mechanics Society is an international non-governmental non-profit scientific organization.

The objective of the Society is to engage in all activities intended to promote in Europe the development of mechanics as a branch of science and engineering. Mechanics deals with motion, flow and deformation of matter, be it fluid or solid, under the action of applied forces, and with any associated phenomena.

Activities within the field of mechanics range from fundamental research on the behaviour of fluids and solids to applied research in engineering. The approaches used comprise theoretical, analytical, computational and experimental methods.

The society is governed by the Council whose members are being elected according to rules set in Statutes.
